

The FRIABLOC[®] Sanitary Grid System

Everything runs well with these system components

The interior of the **FRIABLOC®** sanitary grid system is composed of the tried and tested **FRIATEC** components. We are keeping separate information material on these quality products which we will be pleased to forward to you anytime. We want you to know that you are always on the safe side when opting for **FRIATEC** products.

FRIATHERM®

FRIATHERM® connections were conceived for long-lasting use: conical sockets with press-fit welding joint (extra long bonding zone, up to 36% larger than DIN 8063 specifications)

Quick and simple installation thanks to its connection technology tried and tested a million times

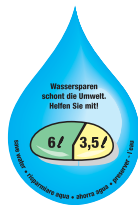

Speedy working due to the FRIATHERM® Component+ bonding system

Easy integration into other pipeline systems, e.g. renovation and reconstruction projects

FRIABLOC® module

Compared to conventional flushing cisterns, your clients can save up to 50% of water when selecting the FRIABLOC® module in combination with our dual-volume flushing cisterns (left button 6 l, continuously adjustable up to 9 l; right button 3.5 l). The coloured decorative strip of the elegantly designed operation panel is interchangeable.

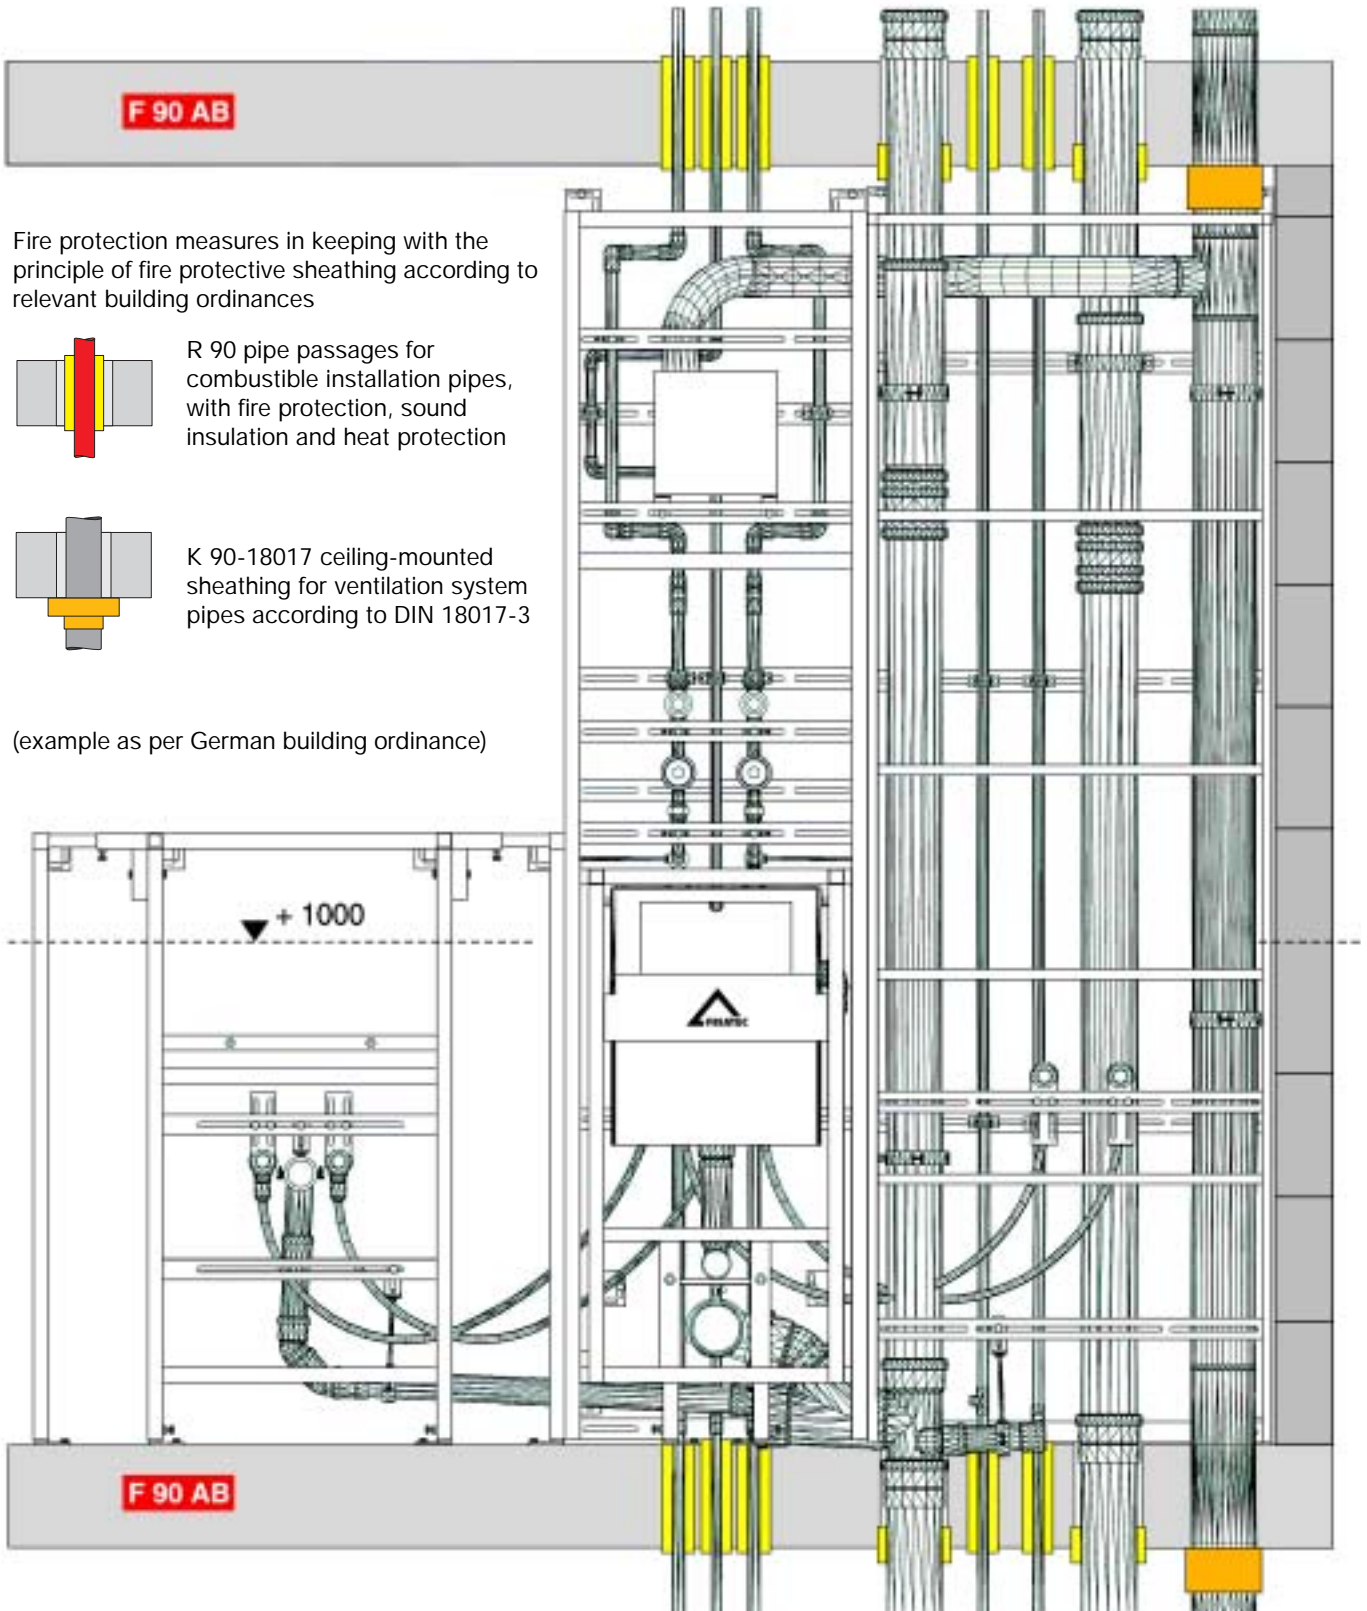

FRIAPHON® wastewater pipes

FRIAPHON® wastewater pipes stand for a forward-looking and, moreover, for a particularly profitable investment. They were conceived for new building, renovation and reconstruction projects. Their sound-insulating dual technology helps to perceptibly increase the comfort of your home. Even though the system offers integrated fire-protection features, its components easily reach a sound level of 19 dB and thus underrun the required 30 dB mark by far.

Practical plug-in connections and special form parts (triple branches) optimise the installation of the system. Our plastic pipes resistant to high-temperature water and corrosion offer optimum protection against external impacts.

The best is always within

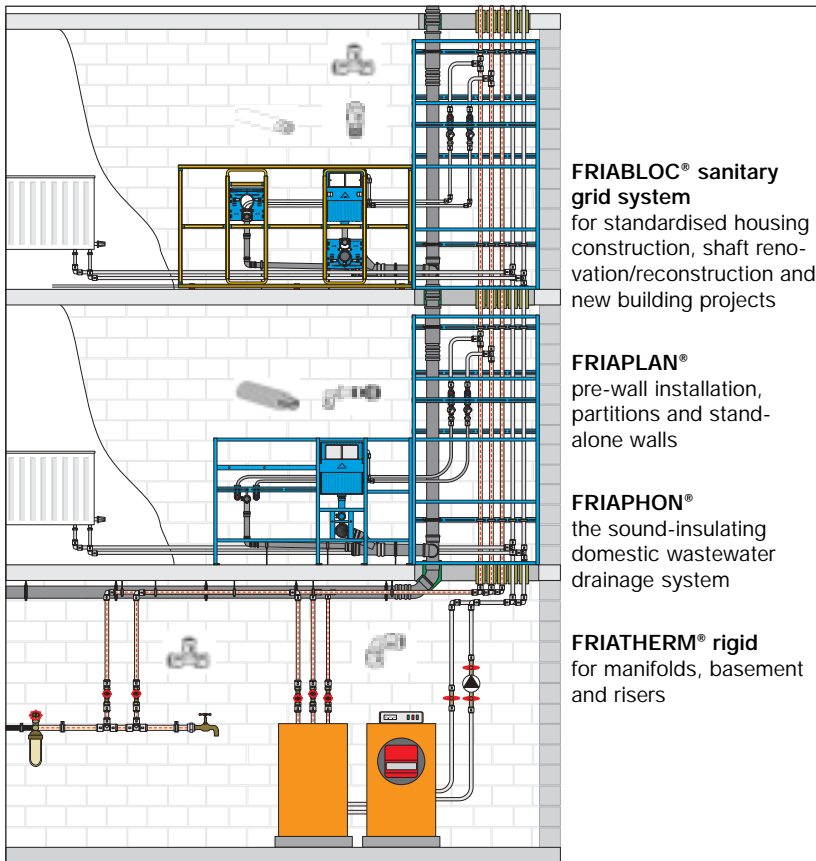

Individual pre-assembly

We also offer pre-assembled project-related FRIABLOC® grid systems in various sizes and equipment variants.

Professional associations trusting in our quality:

FRIABLOC® sanitary grid system
for standardised housing construction, shaft renovation/reconstruction and new building projects

FRIAPLAN®
pre-wall installation, partitions and stand-alone walls

FRIAPHON®
the sound-insulating domestic wastewater drainage system

FRIATHERM® rigid
for manifolds, basement and risers

For any further information, please do not hesitate to send us a fax. It's so simple!

— an **Etex** GROUP company —

It only takes two working days ...

Renovation and reconstruction stages

- Dismantling obsolete sheeting
- Removing obsolete sanitary equipment and pipes
- Opening pipe passages
- Aligning and fixing the **FRIABLOC®** sanitary grid system
- Establishing storey connections
- Installing fire protection collars (if required)
- Connecting to basement pipes
- Conducting pressure test according to DIN 1988
- Reviewing storey connections, heat and structure-borne noise insulation system
- Installing new sheeting
- Fine-tuning complete sanitary system

The special feature of the **FRIABLOC®** sanitary grid system:

In case of renovation and reconstruction measures in occupied buildings, access to tap water and toilet services can be installed in each apartment for overnight use.

... planners

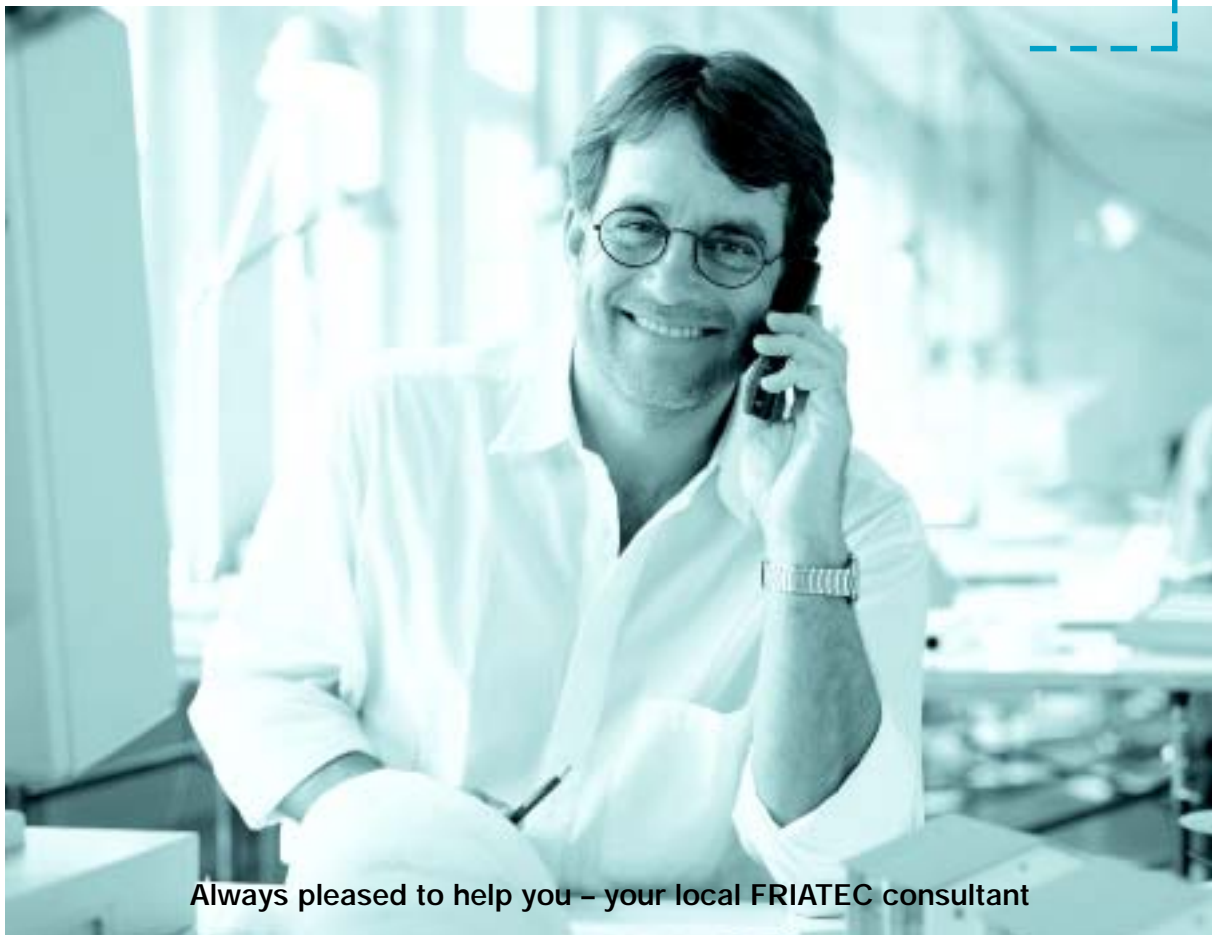

- Free planning support (calculation, requests for bids, and software)
- Building solutions in line with relevant standards
- Reliable time schedules
- Exact cost analysis and preparation of bids

... plumbers

- Construction consulting services and assistance
- Customer-specific system solutions
- Exact time schedules for deliveries and installation
- Installation training courses for plumbers
- Shorter installation periods
- On-site measurement survey in cooperation with **FRIATEC** technical consultant(s)
- Warranty agreements with ZVSHK (German Central Association for Sanitary, Heating and Air-conditioning Engineering)

... building purchasers

- Information material about the **FRIABLOC®** sanitary grid system for tenants
- Speedy mounting in new building, renovation and reconstruction projects
- Only short-term reduction of housing quality
- Assistance through **FRIATEC** technical consultants accompanying the construction project
- System safety – one contact in case of warranty-related damage
- Increased housing comfort thanks to individual design options with high-quality products

Always pleased to help you – your local FRIATEC consultant
